## **NOTICE TO LEXINGTON ELECTRIC SYSTEM CUSTOMERS**

This notice is to inform Lexington Electric System (LES) customers that LES has contracted with **NEAL Technologies and Associates** (NEAL) to perform data collection of Lexington Electric System's distribution electric plant.

- NEAL will be electronically collecting the latitude and longitude (GPS) coordinates of every pole, meter, and other items on the LES system.
- NEAL vehicles will be marked with LES logos.
- NEAL will have to manually visit each and every pole location on the system, which means they will be on every customer's property at some point.
- The project is scheduled to start August 1<sup>st</sup> and continue for approximately eighteen (18) months.

This new Geographic Information System (GIS) will improve LES's ability track changes on the distribution system as well as integrate with several of software programs such as outage management, load flow study, and fault analysis. All of which will support LES' continuing effort to bring low cost and reliable electricity to all of its customers.

**NEAL employees will have all LES contact numbers to call in case a customer questions their identity.**

**If a NEAL employee comes to your property and you want to verify their identity just call the LES office and tell the operator you want to verify an employee of an LES contractor.**
