

Re: Disconnection and Reconnection

As of today, March 20th, LES has the majority of the main lines from the Hookers Bend area down river to the Cedar Bluff area energized. Most all of the Fisherdale area is also energized. LES is concentrating on the Willow Oaks, Gumdale, and Pevahouse/Whites Creek areas today hopefully to have them energized before the end of the day.

LES will primarily concentrate on getting main lines energized before shifting the effort to reconnect services that have been repaired. LES cannot give information on what each customer needs to do in order to pass inspection. That information will have to come from the inspectors as they have to approve the services before LES can re=connect them.

Please continue to visit the website for the latest information.
